## 1. What is the SAP PP module?

---

The PP (Production Planning) module makes it possible to plan production based on both market demand and production capacity. PP creates schedules for production, procurement and purchasing. This ensures that we have the raw materials for production as needed. The module records the manufacturing process with, for example, planned budgets and actual budgets. It records the movement of goods when raw material is converted into a semi-finished product. This module plays a vital role in any manufacturer's supply chain and is primarily made for production managers or others who are involved in manufacturing and planning and in charge of optimizing production costs.

The PP module has 3 main components:

- Process Industry (SAP-PP-PI)
- Discrete manufacturing (SAP-PP)
- Repetitive manufacturing

### **Process Industry**

Process Industry is used for the production of products which cannot be disassembled. Here, a machine called a workcenter in SAP is usually used for the production of a single product. The PP-PI solution is mainly used in industrial processes which use the notion of batch management to differentiate the items produced. The pharmaceutical, food, or chemical industries particularly use this solution. Process manufacturing counts its products in liters, meters or grams

### **Discrete manufacturing**

Discrete manufacturing is used when a single machine is used for multiple production orders and these are scheduled according to production needs. The machine can be used to make different products. The products produced can be counted in units.

### **Repetitive manufacturing**

Repetitive manufacturing is similar to discrete manufacturing but works without production orders (OF). The products are continuously produced for a long time, and the production does not require much control or production order.

These 3 components bring together concepts such as:

- Production planning
- Needs calculation (MRP)
- PIC (Industrial and Commercial Plan, sales forecast at company level), PDP (Master production plan, production forecast at factory level)
- Industrial and commercial plan: sales forecast (at company level)
- Production master plan: production forecast (at factory level)
- Calculation of needs and resources (men and machines)
- Capacity planning
- Manufacturing control
- Production monitoring
- Cost calculation
- Management of nomenclatures
- Range management

## 2. Rapid Views Company

---

Rapid Views is an innovative software editor to accelerate Business Intelligence deployment on SAP HANA.

Comes from the spin-off of the DeciVision R&D entity which has invested for 2 years on SAP HANA technology.

### **R&D as a driving force**

The software developed by Rapid Views is the result of several years of Research & Development: we offer a unique solution on the market to accelerate your BI deployment on SAP HANA.

### **SAP trust**

SAP encourages and considers Rapid Views as a fantastic jumpstart for HANA BI implementation

The RapidViews solution is certified by SAP as "SAP Qualified Partner-Packaged Solution"

### **Strong values**

Our employees share common values: a real passion for Business Intelligence, a strong functional BI expertise and the desired to provide a strong value proposition for our customers

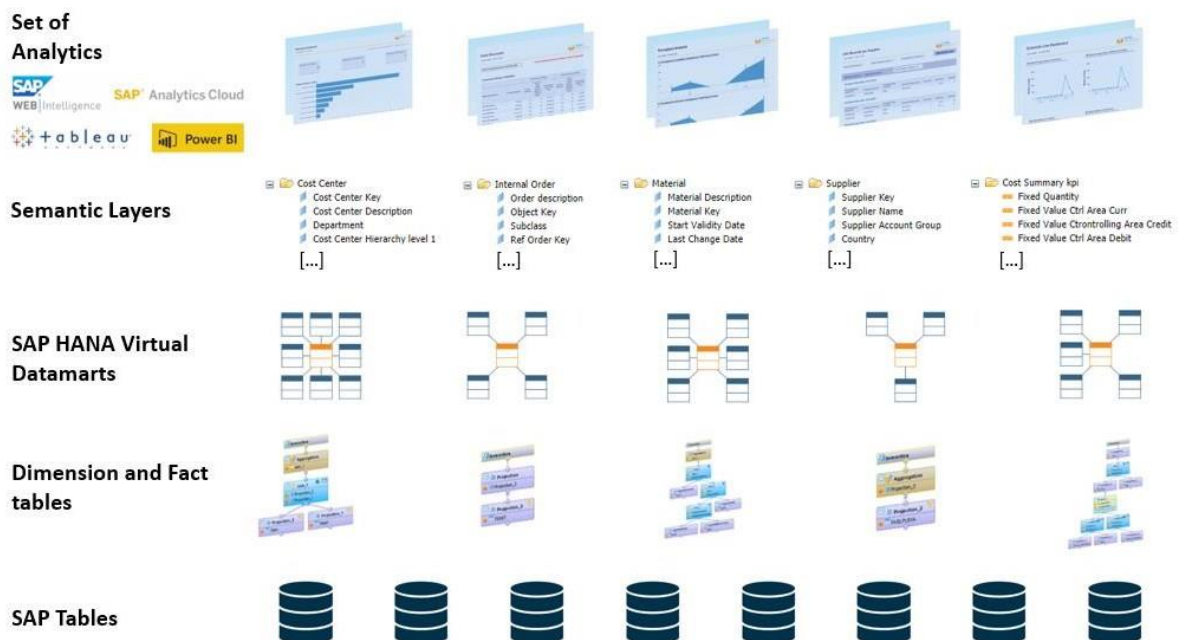

### 3. Les solutions RapidViews

#### 3.1. Concept and presentation

RapidViews goal: to accelerate drastically any Datawarehouse projects on SAP HANA

In few words:

- › Set of Business analytics built either with SAP Web Intelligence, SAP Analytics Cloud, Microsoft Power BI, Tableau Software.
- › Semantic layers for operational reporting on SAP FI-CO, SD, MM and PP.
- › Sets of datamarts for SAP FI-CO, SD, MM and PP modules.
- › A management console which integrates an intelligent repository and an interface for generating customer specifications
- › A full Business Intelligence governance Repository.

RapidViews are certified by SAP:

## Certificate of Qualification

**SAP® Qualified**  
Partner-Packaged Solution

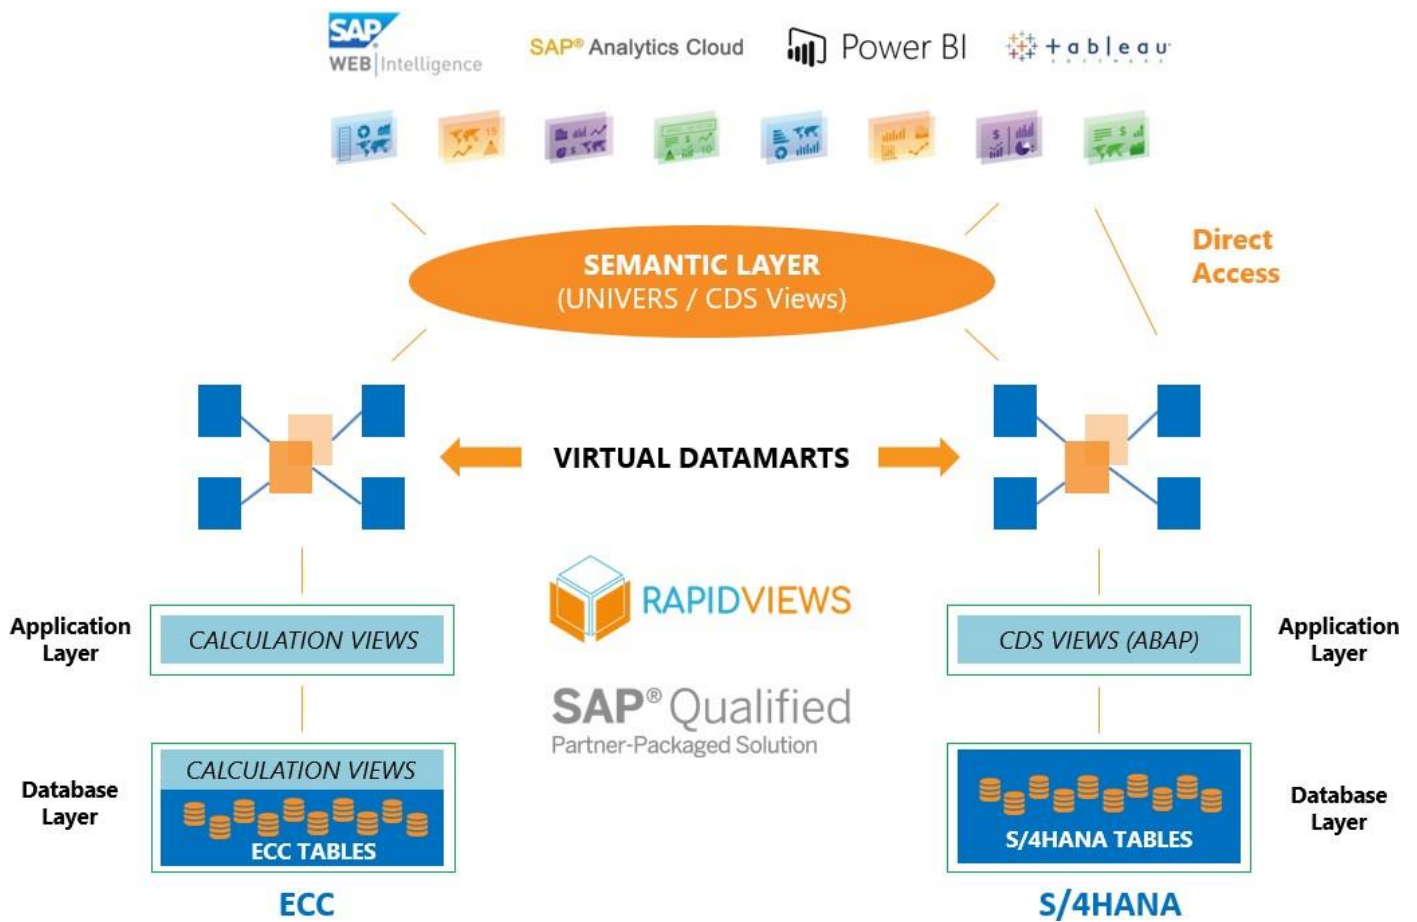

3.1.1. Our global vision BI SAP ERP and BW

### 3.1.2. RapidViews Architecture

## 4. PP RapidViews Overview

### 4.1. PP RapidViews in figures

PP RapidViews includes **66 HANA Views**, **106 KPI**, **15 pre-defined reports** and **8 datamarts**. It covers the following sub-modules:

- › Sales & Operational Planning
- › Demand Management
- › Material Requirement Planning
- › Capacity Requirement Planning

## 4.2. Semantic layer
